

Cycle investing. Feb 2023

1. First question is: where are we in the cycle?
 - a. Get data from FRED fred.stlouisfed.org
2. Is it different this time? (a phrase I hate)
 - a. Or at least what parts are different
3. What are the foreseeable trends for 2023 (first 6 months)
4. Where are corporations spending money, where are they cutting back?
5. Asset prices go up based on availability of money

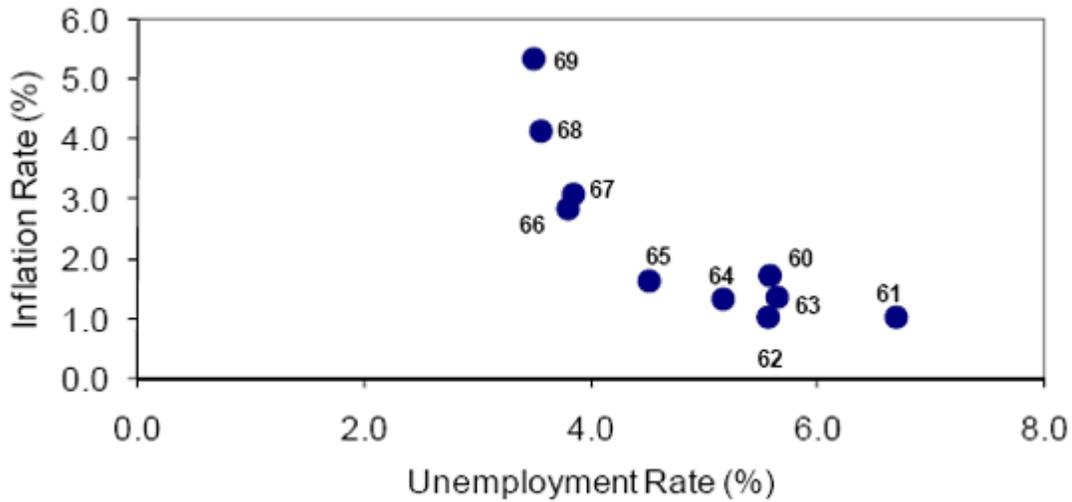

2. Is it different this time?

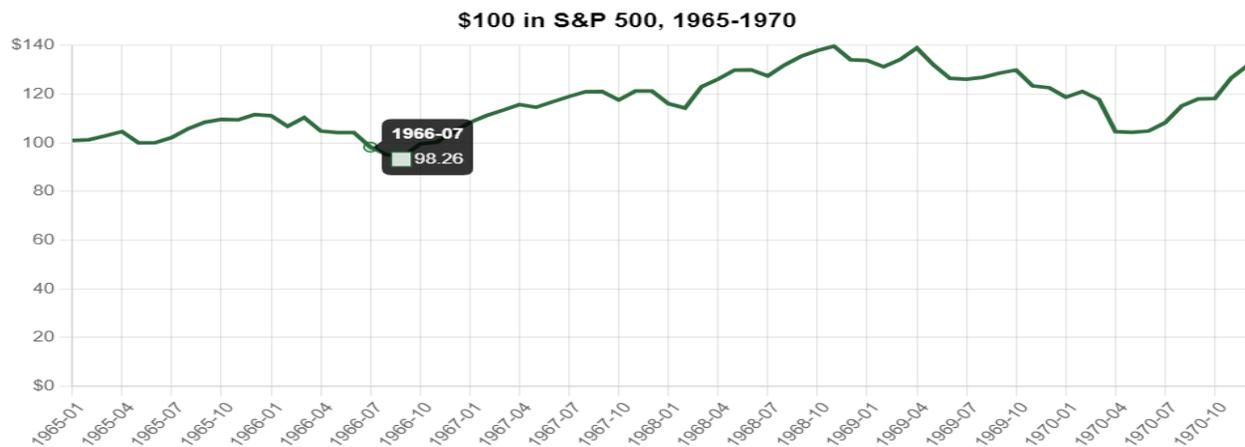

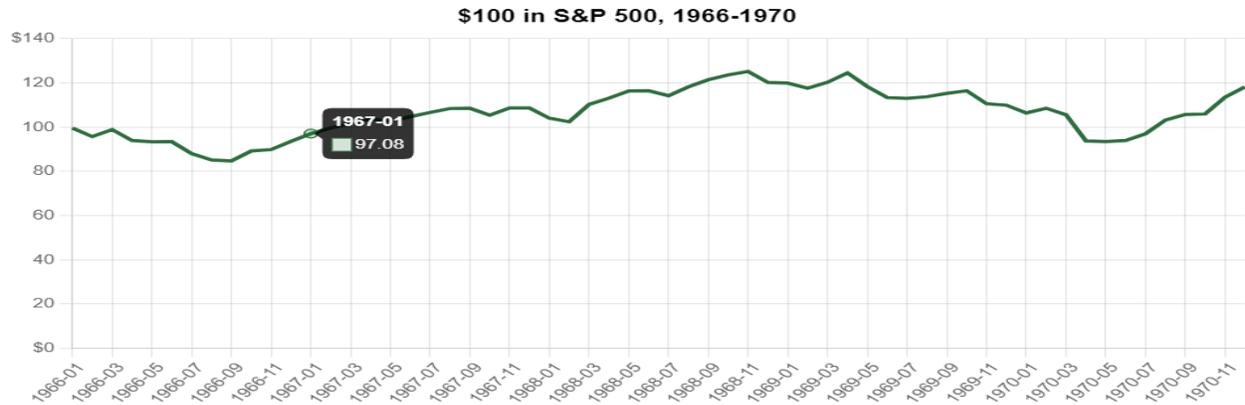

Everyone has been predicting a deep recession based on inflation and the higher cost of capital. But, not only have we NOT experienced significant demand destruction, with China re-opening demand for commodities/ energy, travel will go up.

The USA is at or near full employment, wages continue to go up as companies (even as they prepare for recession) are paying higher wages to attract employees.

European countries have mitigated the impact of the Russian energy reductions.

Instead of a recessionary period it feels like we are entering (in) an inflationary period with high employment, which will have modest economic growth... best comparison is the late 1960's

3. Foreseeable trends

- a. China re-opening. Leads to increase in commodity and oil prices,
- b. de-globalization: leads to redundancies: more demand, lower earnings
- c. destruction of crypto leads to more money into risky stocks
- d. higher interest rates leads to less money in market, less in dividend payers

If you could lock in 7% 30 year return how much less would you allocate to the market?

- e. Transition to green
- f. Baby Boomers continue to age and retire ---> health care, full employment

4. where are corporations spending money, where are they cutting back?

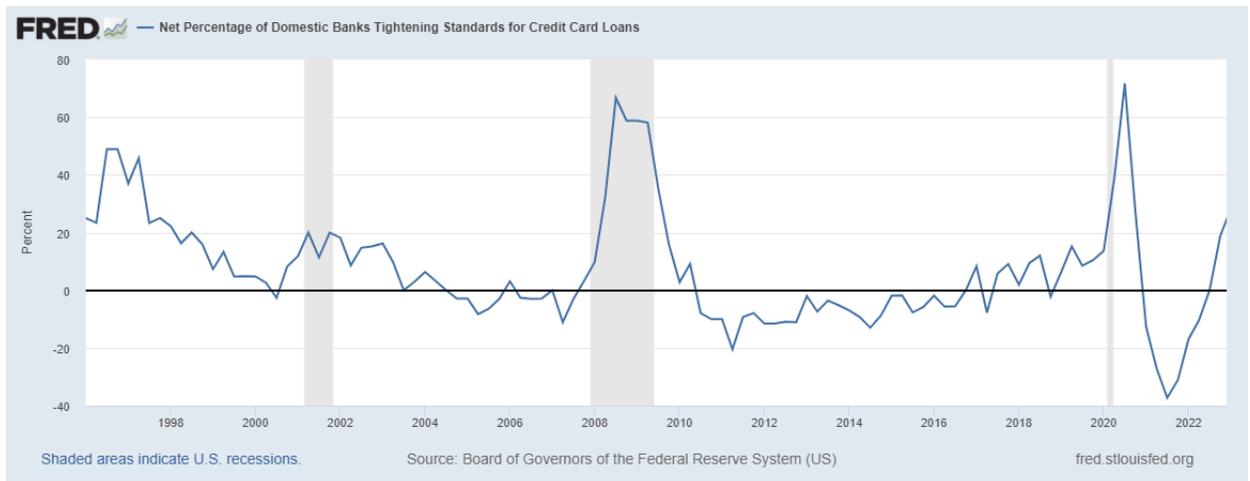

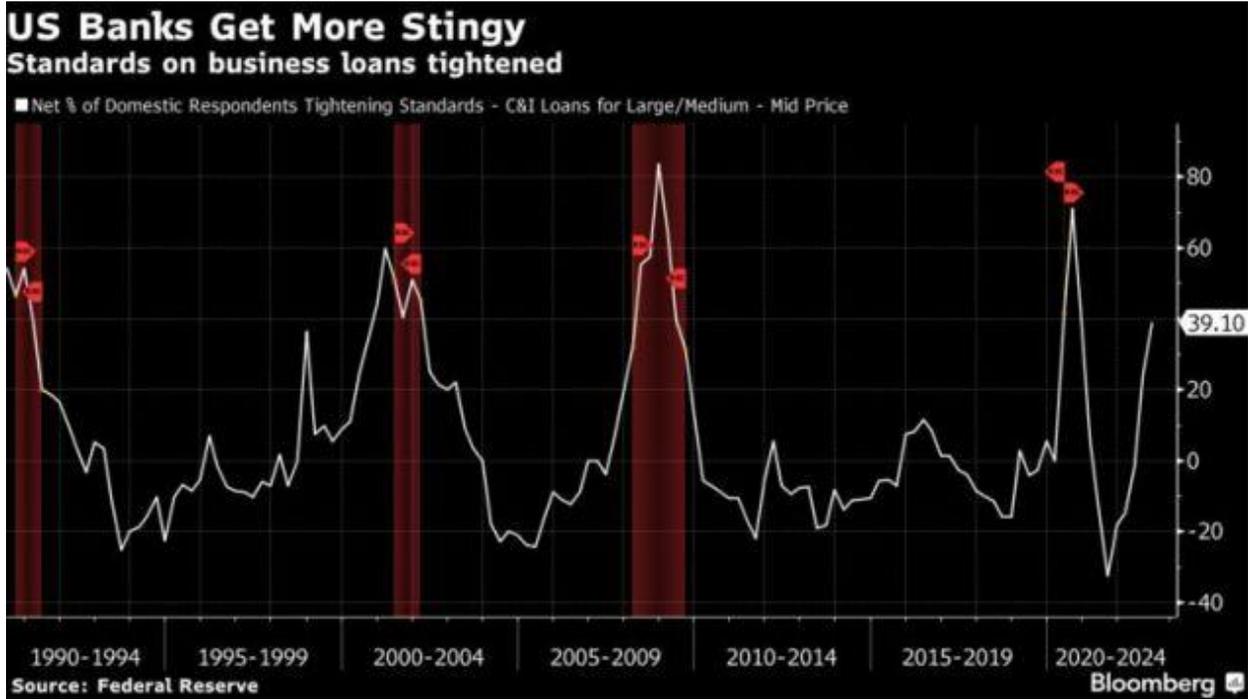

5. asset prices go up based on availability of money

- a. Interest rates are going up

b. credit is both tightening and becoming more expensive

1. this should lead to less money investing in speculation, and more money into what is perceived to be a sure thing, with quantifiable results

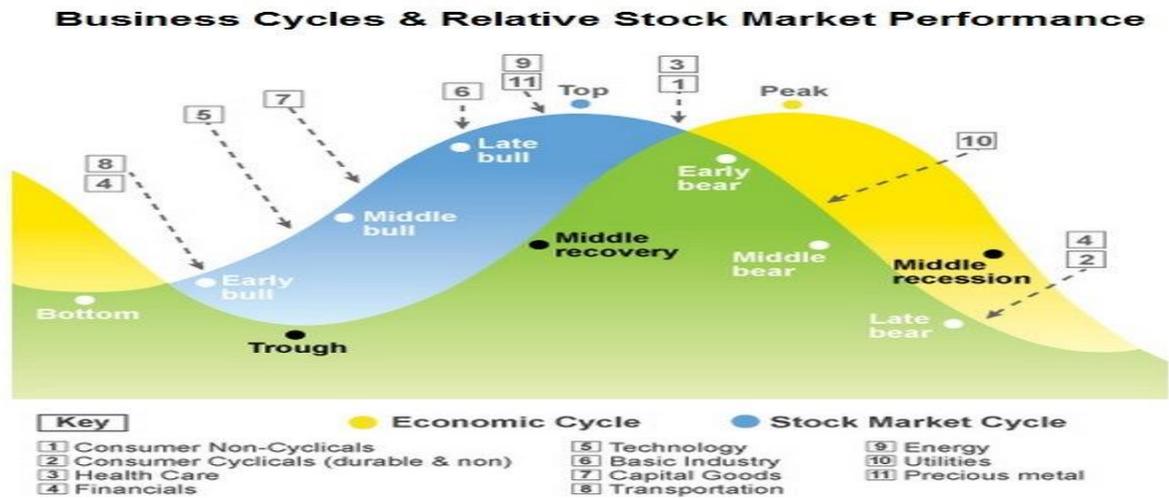

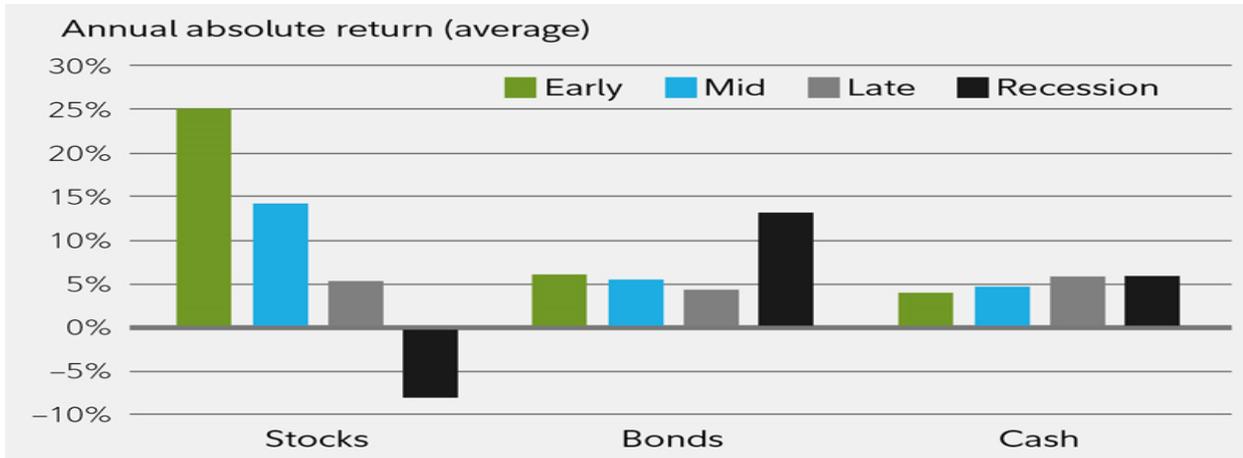

2. Riskier investments will have to give you (promise you) more return to attract your \$\$\$

1. Where are we in the cycle????
 - a. USA
 - b. China
 - c. Europe

Four phases of an economic cycle

© Encyclopedia Britannica, Inc.

Sector	Early Rebounds	Mid Peaks	Late Moderates	Recession Contracts
Financials	+	-	+	--
Real Estate	++	-	+	--
Consumer Discretionary	++	-	--	+
Technology	+	+	-	--
Industrials	++	-	-	--
Materials	+	--	-	--
Consumer Staples	-	-	+	++
Health Care	--	-	+	++
Energy	--	-	++	-
Communication Services	-	+	-	-
Utilities	--	-	+	++

Economically sensitive sectors may tend to outperform, while more defensive sectors have tended to underperform.

Making marginal portfolio allocation changes to manage drawdown risk with sectors may enhance risk-adjusted returns during this cycle.

Defensive and inflation-resistant sectors tend to perform better, while more cyclical sectors underperform.

Since performance is generally negative in recessions, investors should focus on the most defensive, historically stable sectors.

In a Growing Economy

Consider **information technology**.

It has had the highest volatility relative to all sectors over the past 20 years, which could boost portfolio performance. It has often outperformed during the early and mid phases of the business cycle when the economy is growing.¹

As the Economy Slows Down

Consider **consumer staples, health care, and utilities** sectors.

They usually outperformed during the late and recession phases of the business cycle when the economy is slowing or shrinking.¹ They have had the lowest volatility relative to all sectors over the past 20 years, which may lower portfolio risk.

Conclusion: where are we in the cycle?

Feels like mid recession for historical reference

Doesn't feel like a recession

So what to invest in = ????

Best stocks in the 60's

XRJ +900% tech
